

Latest CNL Software Channel Alliance Partner Training Well Received

CNL Software recently held partner training in Washington, DC. The “IPSecurityCenter™ Solutions Engineer” training was held over five days and featured a series of hands-on workshops and seminar style sessions. The focused training event is part of CNL Software’s Channel Alliance Program (CAP) certification and was attended by several key US partners.

Guest presenter Carl Gilbert, Software Solutions Engineer, highlighted the use and application of IPSecurityCenter™ for delivery of a platform to connect, correlate, verify, visualize and manage the wide range of disparate technologies found in the Security and Defense industries today.

Attendees were taken through five core modules of the training; IPSecurityCenter™ Fundamentals, Building Functional Units, Complete Solution Concepts, Advanced Device Integration and Maintenance and Support.

At the end of the session all attendees were awarded certificates of completion, manuals and demonstration software. Feedback was outstanding with one of the participants commenting, “The recent CNL IPSecurityCenter training was remarkable and I look forward to working with all of you further concerning this powerful security solution. The support staff, instructor and students were exceptional and everyone added a great deal to making this such an outstanding class to attend.”

As a leader in the Global PSIM market, CNL Software is committed to providing education, training and support to our partners. We recognize them as a vital part of our software delivery process and will continue to expand and improve opportunities for practical training through our Channel Alliance Program (CAP).

The CNL Software CAP certification program will continue in EMEA through August 2011. Further certification courses are planned for Q1 2012. For more information about training at CNL Software contact training@cnlsoftware.com.
