**For Immediate Release****Pixel Velocity and CNL Software Form Technology Partnership**

**Indianapolis, IN - March 08, 2011 - CNL, a world leader in Physical Security Information Management (PSIM) software, announces that it has formed a technology partnership with Pixel Velocity, a world leader in advanced video automation solutions. The partnership will allow Pixel Video Fusion® to be managed through CNL's IPSecurityCenter™, a software-based integration and management platform.**

The two companies have a shared view that the interoperability between video automation and PSIM systems provides tremendous value to their large enterprise customers. The Pixel Video Fusion® system provides two highly unique capabilities: synchronized, wide-area, high-definition panoramic imagery and Pixel Velocity's 3D-based Site Protection System (SPS). The SPS application provides geospatial data related to protected zone breaches and other events and cross-camera, system-wide, real-time tracking of moving objects.

“When this data is leveraged within IPSecurityCenter, it enables overall facility management whereby users are able to globally administrate all of their building systems and maximize the benefits of Pixel Video Fusion®” says William Beach, Vice President of Sales, Pixel Velocity.

Matthew Kushner, President, CNL Software, commented “The combination of IPSecurityCenter with Pixel Video Fusion® allows aggregated intelligence from all subsystems to be presented and managed in real time with geospatial accuracy. This will allow incidents to be identified and resolved faster and more efficiently.”

###

**About Pixel Velocity Incorporated**

Pixel Velocity has leveraged decades of experience in the defense industry to create the world's first end-to-end video surveillance system specifically optimized to provide high-definition, synchronized multi-camera video and highly reliable automated wide area threat detection over large complex sites. The Pixel Video Fusion® System creates a paradigm shift in video surveillance – a ‘no compromises’ approach to situational awareness that simultaneously delivers wide area, contiguous high definition coverage and detail and coordinated video analytics operating across multiple cameras. Always the right level of detail when it's needed most, delivering maximum surveillance information value to help organizations prevent, respond to, investigate, and conclusively resolve security incidents.

**About CNL**

CNL is a world leader in Physical Security Information Management (PSIM) software. Its award winning technology is deployed to secure cities, critical resources and global commerce. CNL's software sits at the heart of some of the largest, most complex and ground-breaking security integration and business value initiatives in the world. Their work with leading organizations is helping to shape the future of security by offering thought leadership on key issues such as energy reduction, process compliance and business advantage in converged environments.
