BRS Labs Joins CNL Software's Technology Alliance Program

GLOBAL RELEASE – February 7, 2012 – CNL Software, a world leader in Physical Security Information Management (PSIM) software and BRS Labs Inc., innovators of the industry's first behavioral recognition solution for video surveillance, jointly announce today a technology partnership between the two companies. The partnership, under the CNL Software's Technology Alliance Program (TAP), will allow the companies to share development kits, thus creating close integration between their products. The integration will bring together industry leading incident analytics with industry leading situation management software.

AI Sight™, created by BRS Labs, is the industry's first behavioral recognition solution for the video surveillance industry that observes, learns and responds to unusual activity, and memorizes these behavioral patterns as well as objects over a period of time. Specifically designed to autonomously serve as the eyes and brain for critical security environments, AI Sight™, is able to integrate with existing video surveillance infrastructure and identify unusual and suspicious behavioral patterns in real time. This advanced video surveillance technology is currently deployed across multiple verticals and is being actively specified into security projects across the globe.

No human is required to define parameters for the software to recognize specific behavior or objects, as it autonomously reports unusual or suspicious behaviors based on memories it has acquired over time, which significantly reduces the risk of missed events.

“CNL Software continues to optimize and improve the efficiencies of its PSIM product, IP Security Center™. The AI Sight integration will add substantial performance advantages in identifying incidents and trends, while IP Security Center will ensure they are accurately responded to,” said John Frazzini, President at BRS Labs.

“We are excited to be partnering with BRS Labs as they have a unique product in the market place. Together we have a shared vision of increasing the efficiency of control rooms by reducing the amount of human intervention needed, which not only reduces costs but also reduces the potential for operator error,” commented Adlan Hussain, Marketing Manager at CNL Software.

###

About BRS Labs

Alsight™, created by BRS Labs, is the industry's first and only behavioral recognition solution for the video surveillance industry that learns and memorizes both behavioral patterns and objects in very diverse and complex environments. No human is required to define parameters for the software to recognize specific behavior or objects, as it autonomously reports unusual or suspicious behaviors based on memories it has acquired over time, thus significantly reducing the risk of missed events by increasing efficiency and scalability. The Company serves clients with enterprise class video surveillance networks in government, infrastructure, and commercial markets. BRS Labs was founded in November 2005 and is headquartered in Houston, Texas with offices in Washington DC, London, São Paulo, and Barcelona. For more information, please visit www.BRSLabs.com

About CNL Software

CNL Software is a world leader in Physical Security Information Management (PSIM) software. Its award winning technology is deployed to secure cities, critical resources and global commerce. CNL's IPSecurityCenter software sits at the heart of some of the largest, most complex and groundbreaking security integration and business value initiatives in the world. Through working with leading organizations the company is helping to shape the future of security by offering thought leadership on key issues such as energy reduction, process compliance and business advantage in converged environments.
