

For Immediate Release

IPSecurityCenter Selected for One of Largest U.S. Port Authorities

GLOBAL RELEASE – September 19, 2011 – CNL Software was recently selected by one of the largest U.S. Port Authorities to provide the integration and information management platform for port security.

The project consists of multiple ports in the region where container growth and capacity are expected to nearly double from a current 3.5 million containers to 6.5 million containers by 2018.

Heightened security has generated increased investment at numerous critical infrastructure sites across the country. Protecting the port from theft, activism, terrorism and all other forms of

crime requires high levels of security. Over the years the port has deployed a wide range of physical security systems to address these security challenges. This latest enhancement will see all of these systems working together through the IPSecurityCenter™ integration and management platform, aggregating intelligence from these to increase situational awareness.

The solution will allow centralized command and control capability for all of the sites from one location. It consists of various security systems and services, including integrated and comprehensive video surveillance, wireless communications, radar, TWIC compliant access control, and a Command & Control solution for the port.

Matt Kushner, President CNL says, “We are pleased that IPSecurityCenter was selected for this critical Homeland Defense initiative. As one of the largest ports in the US and a huge contributor to the US economy, it is essential that security is World-Class. The selection of IPSecurityCenter will ensure they have consistently high levels of emergency preparedness at all times across all sites.”

###

About CNL Software

CNL Software is a world leader in Physical Security Information Management (PSIM) software. Its award winning technology is deployed to secure cities, critical resources and global commerce. CNL’s software sits at the heart of some of the largest, most complex and ground-breaking security integration and business value initiatives in the world. Its work with leading organizations is helping to shape the future of security by offering thought leadership on key issues such as energy reduction, process compliance and business advantage in converged environments.
