

For Immediate Release

Schneider Electric Endura Integrated with CNL Software's IPSecurityCenter™ PSIM Solution

Indianapolis, IN and Clovis, CA - GLOBAL RELEASE – October 6, 2011 – CNL Software, a world leader in Physical Security Information Management (PSIM) software, and Schneider Electric announce they have completed the integration of the Endura Network Video Management system from Schneider Electric, a world leader in the design and development of next-generation Pelco video security systems, with CNL Software's IPSecurityCenter™ PSIM Solution.

The integration is the result of a close collaboration between the two companies, utilizing the benefits of the Pelco Partner First Technology Development Program. This solution will ensure field integration of critical systems that are both easy and worry free.

The solution will also allow multiple Endura systems to be integrated through one platform, allowing video intelligence to be centrally managed, controlled and shared through a common operating picture for increased situational awareness.

CNL Software has already integrated several key Pelco products into its PSIM platform, IPSecurityCenter™. This addition will strengthen the partnership and provide more choices to end users by creating greater integration possibilities between their respective products. It will also ensure the continued on-going support of all product integrations between the two companies.

“Pelco has long demonstrated its commitment to being an Open Systems Provider with successful integrations and partnerships in a wide range of areas, including Command and Control and PSIM,” says Stéphane Lantoiné, Pelco by Schneider Electric Business Development Manager, Integration EMEA. “We see this security enabling technology as a way of allowing physical security to engage with wider business operations.”

Matthew Kushner, President CNL Americas commented, “The addition of the Endura Network Video Management system greatly adds to the extensive list of driver-based integrations we have already created. With its high-performance network-based architecture, it fits well with the enterprise level solutions where PSIM is increasingly specified by end users. We will continue to add more Pelco products to our list of support systems.”
