

For Immediate Release

CNL Software Combines PSIM with 3D Visualization

GLOBAL RELEASE – July 29, 2011 – CNL Software, the world leader in Physical Security Information Management (PSIM) software, is pleased to announce a technology partnership with Coherent Synchro, developers of specialized Open 3Dimension Visualization software.

The partnership will bring together CNL Software’s industry leading PSIM software with state of the art 3D visualization from Coherent Synchro. The solution will allow all assets, cameras and critical points to be accurately plotted onto the 3D mapping surface. This will give operators the ability to “walk” through buildings and guide ground staff in the event of an incident.

Additionally, it will allow operators to graphically view multilayer live video overlays, giving accurate 3D perspectives for real time situation management.

The addition of IPSecurityCenter™ PSIM to this mapping ensures every alarm is linked to its real world location on the 3D mapping surface. As soon as an alarm enters the system, the operator can select that alarm to automatically graphically view its geographic location. All security information is integrated within the same 3D map. This allows an operator to simultaneously see all other relevant information related to that location, such as cameras that are present with live video feeds, nearby access control points with data on who has passed through most recently, and contextual information such as hazardous materials nearby.

The solution enables real-time situational awareness, coupled with instant access to resources required to remotely manage any incident. All of the aggregated intelligence can be distributed to other operators to form a shared Common Operating Picture (COP).

Jon Lunnerfeldt, Technology Alliance Partner Manager at CNL Software commented “CNL Software is committed to working with all technologies that can enhance situation management within the control room. We are constantly looking for new products that can add value to IPSecurityCenter and this is certainly one of them. We have been impressed by Coherent Synchro’s ability to create 3D views within the control room environment.”

###

About Coherent Synchro

Coherent Synchro is a Software Developer Company specialized on our unique Open 3Dimension Visualization of Security Platform Systems. The software communicates with most of the Security Platforms and allows the user an active inside navigation in a 3 Dimensional environment through the buildings with real interaction with the CCTV and security elements. For more information, visit www.coherentsynchro.com.

About CNL

CNL is a world leader in Physical Security Information Management (PSIM) software. Its award winning technology is deployed to secure cities, critical resources and global commerce. CNL's software sits at the heart of some of the largest, most complex and ground-breaking security integration and business value initiatives in the world. CNL's work with leading organizations is helping to shape the future of security by offering thought leadership on key issues such as energy conservation, process compliance and business advantage in converged environments. For more information, visit www.cnlsoftware.com.
