

For Immediate Release

Universal Security Systems Select IPSecurityCenter™ to Help Secure a Significant Proportion of Kuwait's Oil Refining

WOKING, Surrey, UK - 27 June, 2008 - Computer Network Limited (CNL) announce that they have been selected by Universal Security Systems to supply a security management control system that will integrate CCTV, Access Control, VoIP, GPS Tracking and Tetra Radio Transmission to the Kuwait Council of Ministers for the protection of critical facilities in the oil sector.

One of these critical oil facilities is responsible for the refining of a large proportion of Kuwait's oil supply. This immense project will create the flagship Kuwaiti control room. Due to the scale of the project, implementation will take approximately six months. It will involve integrating both new and existing security infrastructure.

Paul Mangham, Managing Director of Universal says "We chose systems from a range of leading technology manufacturers; at every stage we made sure we were using the best available technology. This was always going to be a no compromise flagship project, which is why we selected IPSecurityCenter™ to form the platform, bringing all of this technology together in the best way possible."

Other manufacturers involved in the project are Lenel for access control systems, Grintek for the perimeter fence, Complus Teltronic for their VoIP and Electrosonic for the video wall.

Keith Bloodworth, CEO of CNL says "This is another example of IPSecurityCenter being deployed in a strategic security project. Using both the broad integration capability coupled with the high end management functionality of IPSecurityCenter, Universal will deliver a tightly managed solution to the client."

About IPSecurityCenter™

IPSecurityCenter is the most advanced security management command and control software available. It integrates disparate security systems such as CCTV, access control and alarms, building management services, enterprise-wide business applications and messaging systems. IPSecurityCenter's ability to completely integrate all security applications, together with the ability to aggregate data and distribute to the point of need, will deliver actionable intelligence and total real time situational awareness. Customised operator guidance and workflows ensure the best outcome to any situation. These workflows also enable efficiencies, which provide a compelling and measurable ROI case.

About CNL

CNL was founded in 2001, to utilise IP network infrastructures to integrate disparate security systems and assets through one interface, allowing customers to leverage significant strategic value for their business. Seven years later and with over 400 satisfied customers, CNL are an industry recognised leader in developing complete IP security software solutions and work closely with partners to lead the convergence of Security and IT.

About Universal Security Systems

Universal Security Systems Limited was founded 25 years ago to specialise as a security systems integrator in the design, installation and support of technology based security solutions. Clients are primarily medium and larger sized organisations of many kinds, who require protection for major, prestigious and/or multi-site property estates.
